November 26, 2012

SUBJECT: Approval to award a unit price contract to SJR Pavement Repair, the low bidder, for the FY12/13 Spray Patch Road Repair Program in the estimated amount of \$54,500. The contract term is one year with two one-year extensions.

SUBMITTING DEPARTMENT: Department of Public Services – Field Operations Division *M.W.*

CITY MANAGER APPROVAL: *[Signature]*

EXPENDITURE REQUIRED	\$54,500 (Estimated)
AMOUNT BUDGETED	\$100,000
APPROPRIATION REQUIRED	\$0
LINE ITEM NUMBER	203-203.00-866.020 (Local Roads – Routine Maintenance)

BACKGROUND INFORMATION:

One of the primary goals of the Department of Public Services' asset management program is the preservation of the City's roadways to prevent costly reconstruction. Preventative and routine maintenance, including crack sealing, road patching, curb repairs, and shoulder grading, must be regularly performed to help keep relatively good roads in good condition. This program consists of patching concrete joints with Spray Patch (stone and emulsion mixture), to limit water infiltration that can lead to premature structural failures. The objective of preventative maintenance is to preserve good quality roads using lower-cost rehabilitation techniques, rather than allowing the roads to deteriorate to a point that requires road reconstruction involving much more effort at a significantly higher cost.

Novi's preventative maintenance program, in conjunction with the other road improvement programs, is intended to result in an overall improvement in the quality of the City's roadways and increase the overall PASER rating for the roadway network. Patching open joints will help maintain the City's local roadways, limiting further deterioration of existing pavement defects and extend the service life of the pavement.

Three bids were received and opened on October 16, 2012 following a public bid solicitation period. The lowest bidder is SJR Pavement Repair. SJR's bid is recommended as being in the best interest of the City as it is responsive (i.e., SJR's has complied with all requirements of the bidding instructions) and it is the lowest price. SJR has satisfactory performed spray patch roadway repairs previously for the City of Novi. A bid tabulation is enclosed.

This work is being awarded now so that road maintenance can be done during periods of dry weather. Otherwise, the bulk of the work is scheduled to begin next spring and completed by June 30, 2013.

The concrete streets that will be receiving spray patch treatment will be determined as the program is further developed over the winter. Spray Patch is scheduled to begin next spring and be completed by June 30, 2013.

RECOMMENDED ACTION: Approval to award a unit price contract to SJR Pavement Repair, the low bidder, for the FY12/13 Spray Patch Road Repair Program in the estimated amount of \$54,500. The contract term is one year with two one-year extensions.

Comments	Bond is renewable annually	None	We have 3 machines available to do spray patching. The machines are Dura Patchers. Demo is available. HFRS2 available in summer. AE-90 would be cold weather patching.	Our bid is high due to the fact the areas we were told to look had small amounts of work. CITY OF NOVI
SPRAY PATCH PROGRAM
SPECIFICATIONS

The following describes the minimum requirements for the mechanized repair of potholes, drains, sunken slabs, shoulders, spawls, cracks, alligating, and expansion joints. Repairs to be made on concrete, asphalt, as designated by the inspector.

TERM OF CONTRACT

The term of the contract is one year with two one-year renewable options.

FISCAL YEAR FUNDING

Fiscal year funding is from portions of the FY 11/12, FY 12/13, and FY 13/14.

GENERAL

The Contractor shall furnish all materials, equipment, labor, and supervision; and shall provide all other means that may be necessary to complete all the work in conformity in all respects to the requirements as set forth in these specifications.

The Contractor shall minimize interference with the public during the progress of the work. A minimum of one lane of the pavement shall be open to traffic at all times. Contractor shall place and maintain suitable barricades, warning signs and traffic regulators as may be necessary for the safety and convenience of the public and protection of the work in strict compliance with the traffic control and work zone requirements contained in the Michigan Manual for Uniform Traffic Control Devices (MMUTCD).

MACHINE OPERATORS

All machine operators shall have sufficient training and experience to place materials with a minimum amount of over spray and material loss. Operators shall be able to control the aggregate and emulsion mix so as to assure a high quality, long lasting repair. Excessive overspray or overfill that creates an uneven road surface shall justify a shutdown of the work until it is corrected.

PREPARATION

The surface of the pavement shall be dry at the time of repair. No joints/crack/hole shall be sealed until the cleaning and preparation of the joints/crack/hole has been inspected and approved. Previously sealed and patched areas shall be cleaned down to bare concrete or asphalt. All debris and objectionable material resulting from cleaning operations will be removed from the pavement surface prior to repair. Following patch removal, the work location shall be cleaned of dust and debris using compressed air. The cleaning shall continue until the entire joint/crack/hole is free of dust, oil, water, old joint and patch material, and any other foreign matter which may prevent bonding to the concrete/asphalt. The operator will then apply a thin tack coat of hot emulsion to the area to be repaired. The area will then be filled with a mix of hot emulsion (under high volume [300-400 CFM] and low pressure [12-15 PSI] air) and limestone aggregate. The mix

shall be approximately 24 gallons of emulsion to one ton of limestone aggregate. This mix shall completely fill all joints/cracks/holes from their bottom to the grade of adjoining pavement. The compressed air will compact the material sufficiently to allow immediate access to traffic without distortion of patched area. A thin layer of dry aggregate will then be placed over the repaired area; loose material swept back to the repair, and compacted.

EQUIPMENT

The equipment used for cleaning and preparing the joints, cracks and holes, and for sealing the same are subject to review and approval by staff before award of bid.

The patch machine will be totally self-contained with integral hopper for aggregate, or trailer mounted machine with the aggregate feed from towing truck.

The patch machine must have a tapered, adjustable height nozzle at the end of the application hose to concentrate and direct the flow of mixed repair material directly into cracks as small as 2". This also allows for the repair of sharp edges, such as catch basins, etc. The nozzle size and height shall limit over spray to a 3" maximum on either side of the joint.

Air compressors shall be portable or truck mounted; capable of furnishing not less than 100 cubic feet of air per minute at a pressure not less than 90 pounds per square inch. Suitable traps shall be employed to maintain the compressed air free of oil and moisture.

Compaction of final product shall be achieved using a hydrostatic/motorized drum roller, or equivalent approved by the DPS Supervisor.

AGGREGATE

Aggregate shall be Michigan #H-1 or Ohio #9 crushed limestone. All materials shall be MDOT approved/certified.

STORAGE

Arrangements for the storage of equipment and material are the sole responsibility of the contractor. City of Novi facilities/yards will not be available for material storage.

EMULSION

Emulsion shall be HFRS-2, AE-90, APME. Emulsion will be certified for compliance, as well as to prevent runoff and bleeding. Runoff and bleeding will not be permitted.

SAMPLING AND TESTING

All material shall be properly identified. Material testing and certification documents must be made available upon request to the City of Novi.

CONSTRUCTION METHODS

All work must be completed at one location at a time. Exceptions to this specification must be approved by a DPS Supervisor.

The Contractor shall take all necessary precautions to avoid excessive sealant from being discharged onto the pavement.

Application of the sealing emulsion and aggregate shall be done so as to completely fill the joint/crack/hole so that the repair is even with adjacent surfaces. After the first pour has cooled to the temperature of the pavement and settled, additional pours shall be made to fill the void. An additional touch up may be necessary after time and traffic has further compacted the sealant/aggregate mix. All "touch ups" greater than or equal to ½ inch depth within one year of installation shall be incidental to the unit pricing. Any overspray of material shall be minimized to ensure a smooth drive path.

The compound shall not be placed when the surface temperature is less than 40 degrees Fahrenheit, except by the approval of the DPS Supervisor.

Traffic shall not be permitted over the joint/crack/hole until the compound has hardened sufficiently to resist pickup and until stone has been installed over poured joints/cracks/holes.

Compound/stone chips in the gutter pan shall be removed by the contractor the same day to prevent obstruction of storm water flow.

FINAL CLEANUP / SWEEPING

The work shall not be considered complete, and payment not made, until the area has been restored to a neat, orderly appearance acceptable to the DPS Supervisor. Equipment, excess material, rubbish, etc., resulting from the Contractor's operation, must be thoroughly removed from the site.

Any other material removed from the joint/crack/hole shall be disposed of by the Contractor in a manner approved by the DPS Supervisor, and shall be considered incidental to the work. Loose aggregate dislodged by traffic after the final acceptance by the City shall be swept by the City.

METHOD OF MEASUREMENT

Cleaning and resealing joints/cracks/holes will be measured by length in linear feet, measured along the centerline of each joint/crack/hole.

Payment for any joint/crack/hole exceeding a width of 10" for a length of more than 12", and deeper than 8", will be increased proportionately (e.g., a 15" width, deeper than 8", will be paid at the unit rate multiplied by a factor of 1.5).

RECONCILING PAY UNITS

The DPS Supervisor will record, on a daily basis, the quantity of actual pay units earned for each work site. The contractor shall make available an authorized representative to review this record and verify this quantity daily with his/her signature. Any dispute over pay units earned must be resolved before additional work may commence.

TOOLS AND EQUIPMENT

The Contractor shall furnish suitable tools, equipment.

PROGRESS

Progress shall be continuous other than disruptions caused by inclement weather.

PROTECTION OF WORK AND PROPERTY
